

erally rate as Superhuman Prime Runners, or even higher. All dragons of a certain type have the innate powers listed for their species. Additionally, some dragons may have further individual powers (listed as such in the description), though these are not universal throughout each type.

### Common Powers

Dragons are all capable and powerful magicians and practice their own tradition beyond anything mere metahumanity has achieved. They also have a power unique to their kind, called Dragonspeech.

**Dragonspeech:** Dragons are incapable of vocal speech, but they are able to communicate telepathically with other beings in their line of sight through Dragonspeech. This telepathic communication, or dragonspeech, can't be picked up by microphones or technology, so dragons wishing to communicate through modern technology must employ a human or metahuman as "translator."

**Skills:** Assensing 8, Conjuring group 6, Exotic Ranged Weapon 6, Flight 6 (Swimming 6 for leviathans), Perception 6, Sorcery group 8, Unarmed Combat 6

**Innate Powers:** Dragonspeech, Dual Natured, Elemental Attack (usually Fire), Enhanced Senses (Enhanced Smell, Low-Light Vision, Thermographic Vision, Wide-Band Hearing), Hardened Armor 8, Mystic Armor 8, Natural Weapon (Bite/Claws: DV 10P, AP -2), Sapience

**Individual Powers:** Animal Control, Compulsion, Corrosive Saliva, Fear, Influence, Noxious Breath, Venom.

**Notes:** All dragons have the Magician quality and know most spells. They also have +2 Reach.

### Eastern Dragons

Eastern dragons are native to Asia. An eastern dragon's head and body measure about 15 meters in length. Its height at the shoulders is 2 meters. Its tail is an additional 15 meters long. It has a serpentine shape, with a broad, low head adorned with a fringe of whiskers

along the chin and rear portions of the skull. Multiple pairs of horns rise from behind the eyes, and a pair of barbules descends from beneath the pronounced nasal region.

Scaly armor covers the body, neck, and tail, which are surmounted by a ridge of membrane-connected spines. The highly dexterous paws are four-fingered (though some variants may possess three or five fingers per paw), with each digit ending in a large claw. The most common pattern of eastern dragon coloration is iridescent green with golden whiskers and belly scutes, but various other color patterns have appeared.

**Sirrush:** The sirrush, indigenous to Asia Minor, appears similar to the eastern dragon. However, its limbs are longer and its tail shorter. Its head is narrower and deeper, and it

lacks whiskers and barbules. The digits of the sirrush's hind paws are all forward facing and show limited dexterity. Its scales tend to be less colorful, more often in earth tones of brown, gray, gold, and terra cotta. In terms of game statistics, though, a sirrush is essentially identical to an eastern dragon.

### Feathered Serpents

Feathered serpents are native to South and Central America, as well as Africa. A feathered serpent is a long-bodied dracoform with one pair of wings and one pair of limbs. Most feathered serpents are 20 meters in length from head to tail and have a wingspan of 15 meters. Their contour feathers and prominent feathered ruff are often a dazzling rainbow of colors. Membranes stretch between the extended finger bones of their large wings. Behind the wings is a pair of limbs that end in paws. These paws have five digits, one of which is an opposable thumb, giving it sufficient dexterity to manipulate objects. Many specimens have a tail spine connected to a venom sac, or similarly equipped fangs.

Many specimens have a tail spine connected to a venom sac, or similarly equipped fangs.

### Leviathans

Leviathans, or sea dragons, are found in deep salt-water habitats. A leviathan's serpentine head and body measure approximately 25 meters in length. It has four stubby limbs equipped with powerful webbed claws. Though they have opposable thumbs on their forelimbs, leviathans have poor manual dexterity. Slow and clumsy on land, a sea dragon is capable of swimming swiftly and gracefully using the movement of its body and limbs. Leviathans are capable of breathing both water and air, though no leviathan has ever been seen on land. The long, flat head is equipped with powerful jaws, as well as a strip of long kelp-like hair running down its dorsal ridge. Leviathan scales are small and fine,
